

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. (Currently Amended) A camera comprising,
an actuator,
a finder driving unit that drives a finder optical system, and
a driving member which rotates around the image-taking optical axis by the driving force from the actuator and transmits the driving force to the finder driving unit,
wherein two gears are formed integrally on the outer and inner circumferences of the driving member, of these two gears, a first gear is interconnected to the actuator and a second gear is interconnected to the finder driving unit, and
the two gears are formed at different positions in the direction of the image-taking optical axis ~~in the driving member.~~
2. (Original) The camera according to Claim 1,
wherein the distance between the image-taking optical axis and the bottom of the second gear is equal to or shorter than the distance between the image-taking optical axis and the bottom of the first gear.
3. (Previously Presented) The camera according to Claim 1,
wherein the finder driving unit is positioned outside of the driving member.
4. (Canceled).
5. (New) A camera comprising:
an actuator,

an external member driving unit that drives an external member not positioned in an image-taking optical path, and

a driving member which rotates around the image-taking optical path by the driving force from the actuator and transmits the driving force to the external member driving unit,

wherein two gears are formed integrally on the outer and inner circumferences of the driving member, of these two gears, a first gear is interconnected to the actuator and a second gear is interconnected to the external member driving unit, and

the two gears are formed at different positions in the direction of the image-taking optical path.
